Travesy Media React Crash Course

WEEK 1 – React Fundamentals & Setup (Mindset Shift) Goal:

Understand *what React is* and stop thinking in pure DOM terms

Topics

- What React is (and what it is NOT)
- Why React exists (component-based thinking)
- React vs Vanilla JS (DOM vs Virtual DOM – concept only) •

Setting up a React app

  - create-react-app **or** Vite + React

- Project structure (very light overview)
- JSX basics
  - JSX ≠ HTML
  - Expressions in JSX {}

Practice

- Create a React app
- Edit the default App component
- Display:
  - Name
  - A sentence using JS variables
  - Simple JSX expressions

Mini Task

Build a **"Hello React"** page that displays dynamic text using variables.

WEEK 2 – Components & Props (Core React

Thinking) Goal: Think in components, not pages

Topics

- What is a component?
- Functional components
- Naming components
- Exporting & importing components
- Props
    - Passing data to components
    - Using props in JSX

Practice

- Create:
    - Header
    - Footer
    - Card component
- Pass text, numbers, and strings as props

Mini Task

Build a **Profile Card App**
(Name, role, short bio passed via

props) Check this [frontendmentor link]

WEEK 3 – State & Events (Interactivity

Begins) Goal: Understand **state** and user

interaction **Topics**

- What is state?
- useState hook
- Updating state correctly
- Event handling in React
    - onClick
    - onChange

Practice

- Counter app
- Toggle text (show/hide)
- Simple form input (controlled input)

Mini Task

Build a **Counter + Toggle App**

- Increase / Decrease counter
- Toggle a message on button click

Check this link

WEEK 4 – Lists, Keys & Conditional

Rendering Goal: Render dynamic data like

real apps do **Topics**

- Rendering lists using map()
- Importance of key
- Conditional rendering
    - &&
    - Ternary operator
- Handling empty states

Practice

- Render a list of users
- Conditional “No items available” message

Mini Task

Build a **Simple Todo App (No storage**

yet) • Add todo

- Display list
- Delete todo

Check this link

WEEK 5 – Forms & Basic App

Structure Goal: Handle user input

properly

Topics

- Controlled forms
- Handling multiple inputs
- Lifting state up
- Component communication (parent ↔ child)

Practice

- Form with:
  - Name
  - Email
  - Message
- Display submitted data

Mini Task

Improve the **Todo App**

- Add form validation
- Clear input after submit

WEEK 6 – Effects & Data Fetching

Goal: Introduce side effects carefully

Topics

- What useEffect is (simple explanation) •

  When useEffect runs
- Fetching data (using fetch)
- Loading & error states

Practice

- Fetch users from a public API
- Show loading text while fetching

Mini Task

Build a **Users List App**

- Fetch users
- Show loading
- Display user names

WEEK 7 – Styling & Project Polish
Goal: Make apps look

acceptable **Topics**

- Styling in React
    - CSS files / Tailwind
    - Inline styles
- Basic folder organization
- Reusable components

Practice

- Style previous projects
- Clean up folder structure

Mini Task

Style the Todo or Users app

- Card layout
- Buttons
- Spacing

WEEK 8 – Final Mini Project

(Capstone) Goal: Apply everything

learned **Project Ideas (Choose One)**

- Todo App (with filtering)
- Simple Blog List
- Notes App
- Basic Dashboard

Requirements

- Components
- Props
- State
- Lists
- useEffect
- Basic styling
